zgrep '\t\\r\\n' *zips/*zipinfo* I couldn't find any instances of tabulation or carriage returns. I knew that my problem was definitely due to some encoding issue. (Encoding) zgrep -i '\x08' *zips/*zipinfo* Hmm, no matches. I was certain I encoded it correctly. After some searching I realized the problem. One of my files was encoded as UTF-8 (which seems to be the default on OS X 10.8). As I only had MacTeX installed, I tried to encode it as something else and the problem went away. utf8 no mac 10.8 tex So the issue was that with UTF-8 MacTeX was interpreting the UTF-8 encoded file as ASCII and failing to process the accents in the Cyrillic alphabet. I have no idea why this would happen and I'm grateful for any help on the matter. Hi. I have

found your post while googling for answer to the same problem. I have the same problem but with the zip format. After conversion in ZipArchive to unzip, some of my files are written in UTF-8 format and their contents are not correctly parsed in

TeX. When I have a.tex file inside a.zip archive and I open it with TeXShop I got the following message : (prj) user@user-MacBook:~/Documents/prj\$ texwork This is TeXWork v2.13.1034. There are currently no changes in this version. texinput> document This is TeX 82157476af
